ALL OUR OFFERS

EXPRESSION

VEHICLES TAILORED TO YOUR NEEDS!

Choose your body style, layout and options — as packages or individually — and configure your motorhome so it perfectly matches your needs and desires.

- A fully configurable motorhome
- Available across the entire range
- Endless option combinations (almost)
- A vehicle that reflects your personality

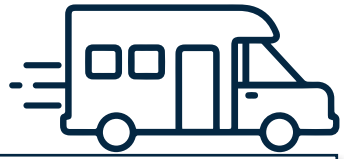

EVIDENCE

READY-TO-GO VEHICLES!

Évidence means total comfort. The best motorhomes equipped with all the essential options for worry-free travel, at a packaged price.

- A simple and clear offer, quick to understand
- Motorhomes equipped with the best options
- Great value pricing to fully enjoy your holidays

SELECTION

SPRING EDITION

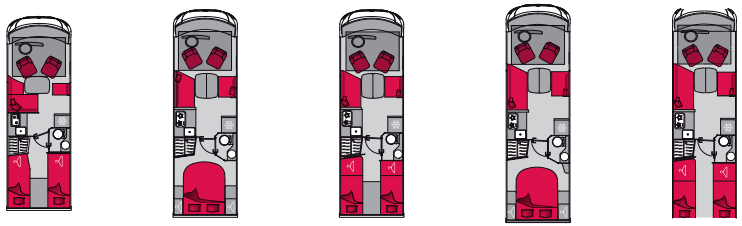

New options, a new layout or a new design... the Sélection Spring Edition is an opportunity to showcase new features and innovations throughout the year.

- A motorhome designed to stand out and spark curiosity
- A limited-time and limited-quantity offer
- Once a year
- Attractive pricing

Notes
This brochure reflects the information available at the time of printing and does not constitute a contractual document under any circumstances. Despite the care taken in producing this document, printing errors may still occur. We reserve the right to modify equipment or improve products on current-year models without prior notice. Vehicles may be shown with special or optional equipment listed in the corresponding price lists and available at extra cost. Styling and decorative elements used in the visuals of this catalogue are not part of the vehicle or delivery specification. The available payload corresponds to the difference between the technically permissible maximum laden mass and the mass in running order. The latter includes the vehicle and its body structure, furniture and standard equipment, 90% fuel tank capacity, one 13 kg gas bottle, 1 litre of fresh water, an empty waste-water tank and a driver weight of 75 kg. The fresh-water tank capacity considered for calculating the mass in running order is 1 litre. This complies with regulations and, in particular, the number of approved travelling seats defined during homologation. It is the user's responsibility to adapt the load and number of passengers carried according to the vehicle's payload capacity, while respecting the technically permissible maximum masses overall and per axle. If necessary, the user may reduce luggage or the number of passengers carried in order to increase the fresh-water capacity beyond this value. The maximum fresh-water capacity is specified for each vehicle in the "autonomy" section. Please ensure that the permissible maximum loads (overall and per axle) are always respected. Warning: optional extra equipment and accessories are not included in the vehicle's mass in running order. Consequently, they systematically reduce the available payload and, where applicable, the number of travelling seats. Your dealer will gladly provide information regarding the exact specifications of models available in each country. Before placing an order, please check with your dealer for the latest product and collection information. Information concerning delivery, appearance, performance, dimensions and vehicle mass corresponds to the data available at the time of printing. These specifications and tolerances comply with European regulations (EU Regulation 1230/2012), but may nevertheless change before purchase or vehicle delivery.

Weight and towing
The manufacturer undertakes to deliver a vehicle whose actual mass in running order falls within a factory tolerance of plus or minus 5%, as retained during homologation procedures. The maximum towing capacity is a chassis-related value linked to the vehicle homologation. Depending on the tow hitch fitted to the vehicle and the specific values provided by the hitch manufacturer, the maximum trailer weight the vehicle may tow may be lower. The tow hitch resistance characteristics (particularly D and S values) are engraved on a plate attached to it. The D value makes it possible to calculate the maximum permissible trailer mass using the following formula: MR = D × T / [(9.8 × T) – D] Where: MR = maximum possible trailer mass (in tonnes) T = maximum authorised mass (GVWR) of the vehicle (in tonnes) D = value (in kN) indicated on the tow hitch Example: with D = 11.3 kN and a 35 L base vehicle, the maximum trailer mass would be: MR = (11.3 × 3.5) / [(9.8 × 3.5) – 11.3] = 1.72 t (or 1,720 kg). The vehicle's maximum towing capacity may reach up to 2.5 t.
